Professional Experience

Chief Operating Officer

nKey Mobile Solutions

May 2011 – Present

Responsible for the daily operation of the company and routinely reports to the CEO. Oversees app creation, which includes strategy, design and product management. Also leading the development of great mobile applications.

Lead Software Engineer

Ekolivre

March 2008 – December 2011 (3 years 10 months)

Leading the development of quality and enjoy-using applications, coordinates a scrum team and provides short-term Java and Android development training.

Projects

EI Domvs

Project Lead

EI Domvs is a software project that aims to automate buildings and residences by monitoring and controlling devices and sensors. The goal is to provide an interactive and secure environment for people to live in.

ObServer

Project Lead

ObServer is a monitoring system for central alarms designed for security companies, that allows the retrieval of detailed information regarding the state of the buildings it listens for in real time.

Lead Software Engineer

ArcTouch

August 2009 – March 2011 (1 year 7 months)

Custom software design, development and app store deployment for iPhone, iPad, BlackBerry, Android and Palm Pre.

Projects

Salesforce.com's Chatter for iPad

Developer

Salesforce.com's Chatter for iPad (<http://www.salesforce.com/chatter/>) is an iPad collaboration application that was basically designed to be a "Facebook for Enterprise." It takes the fundamental communication and collaboration features of a consumer product like Facebook but implements it on an enterprise level. The end result is social platform for business communications that hooks into the existing Salesforce.com platform seamlessly.

iQuad

Project Lead

Quadzilla Performance Products (<http://www.quadzillapower.com>) has a hardware product called Adrenaline that is installed in a car and collects information about the car. iQuad is an iPhone that connects to the Adrenaline via WiFi using a base station in the hardware, to display this information in a great UI.

Gas Monitor Simulator

Project Lead

LightsOn Safety Solutions (<http://www.lightsonss.com/>) makes training simulations for people involved in mining and chemical industries. This iPhone/iPod touch app is designed for trainers to run simulations with one or more students. Both the trainer and the student use the same app (they choose either trainer or student when it runs) and the devices all communicate with each other wirelessly (WiFi) by finding each other on the same local subnet.

Walmart

Developer

This project aims to enable web applications to use native phone features and components. The target platforms are iPhone, Android and BlackBerry. As it is much like an API for developing of web applications that behaves like a native application, there is also a database and web cache implementations to be compliant with HTML 5 specification.

Handstand

Developer

This project aims to be a framework for portable magazines such as Maxim and Outside. It includes articles, interviews, photos and Facebook integration. Handstand is available for iPhone and iPad.

Cam A Lot

Developer

Cam A Lot enables the user to connect and manage MJPEG-enabled cameras from vendors like Axis, Airlink, Canon, Edimax, Evocam, Mobotix, Linksys, Sony, Toshiba and so on.

Chrome

Developer

American National Property and Casualty (ANPAC) offers a service to insure classic cars called Chrome. <http://www.anpac.com/chrome> This project is an iPhone/iPod Touch application for them to appeal to classic car owners.

CityMint

Developer

This is an iPhone app that uses CityMint's web server to order food from local restaurants. Yelp Integration and GPS Mapping are some of the available features, apart of JSON object serialization.

Tip'Em!

Developer

This project is for you to split the check from a pub or restaurant among your friends. It is a very simple project available for Android, Palm Pre and BlackBerry, however it makes use of a lot of custom drawing in each of it's supported platforms.

Web Developer

Tibox Innovations

March 2007 – August 2009 (2 year 6 months)

Pragmatic analysis and development of RIA applications in Java. Develops a platform for corporate communication called Allert, with JSF (MyFaces, Tomahawk and RichFaces), EJB 3, JPA (Toplink), SOAP Web Services (JAX-RPC and JAX-WS).

Progress Programmer

Datasul Santa Catarina

December 2005 – November 2006 (1 year)

Development and customization of ERP EMS 2. Working with processes integration and programs of different technologies.

PHP Programmer

Sine Qua Non

May 2005 – December 2005 (8 months)

PHP developer and maintainer from Drogaria Catarinense web project. Responsible for maintaining the portal's public and administrative areas.

Education

Bachelor of Computer Science

Universidade Federal de Santa Catarina

August 2007 – 2011 (expected)

Computer Technician

Sociedade Educacional de Santa Catarina

February 2005 – December 2006
